# User introduction

Thank you for taking part in the evaluation of "Mindful", a Chrome Extension designed to help web users like you to be more mindful when navigating the web. This evaluation usually lasts approximately 30 minutes, and will be recorded and posted on our research website.

Your task today is to follow the guidelines provided in the user tasks document, which will navigate you through our application to determine the level of usability of our application. The observer assisting in the evaluation will supervise the evaluation, and provide assistance wherever needed. We would like to emphasize a few key guidelines for the test:

1. The version of the product is only a low-fidelity prototype. Don't pay much attention to the color and spacing, but focus on the usability and general feel of the application.
2. **The product is being tested, not the user**. Please verbalize any concern, hesitation, difficulty or general confusion when using our application. **This information is invaluable to us in order to make the product easier to use for users like you**.
3. Don't hesitate to ask questions or better explanation throughout the exercises.
4. Use the application as you would normally when browsing the web.

The findings in this evaluation will be used in order to determine if our application meets our usability goals in order to create high fidelity prototype.

We would like to thank you again for your time.
